

Artificial Intelligence in Every Day Social Life

Seminar paper from the year 2014 in the subject Computer Science - Internet, New Technologies, grade: A, Cardiff Metropolitan University (Cardiff Metropolitan University), course: MSc Technology Project Management, language: English, abstract: Importance of technology has been accepted in every industry; it is being used by different professionals in different forms in order to make their work simple, accurate and also to understand their work. There are a large number of softwares, customized, non customized, sophisticated to meet professional requirements and help them in delivering accurate work. Now most of the data driven decisions of the business are being taken with the help of technology, it has made work more simplified and data analysis systems better. Apart from this, the modern legal system has also accepted the importance of technology in the industry. Though there are certain basic softwares such as MS office, emails etc which are being used for the purpose of data retrieval; there are other sophisticated systems as well which help in improving organizational culture, better decision making, knowledge sharing etc in the business. One such software is artificial intelligence which is being widely used in the industry. This paper has been written with the objective of understanding the importance of artificial intelligence in the social life of people. This paper will include a comprehensive analysis on the topic, include advantages and disadvantages of artificial intelligence, its determinant and legal dimension of the subject; it also includes the social and ethical implication of the topic. This paper will facilitate the reader in understanding the topic and legal dimension attached to it.
